

All NEW Gzelle Auto Bed Mover

The First Choice in Bed Movers is now
Fully Automatic and Whisper Quiet!

While retaining all the features of the original, highly acclaimed Gzelle Bed Mover, the Gzelle Auto utilises the latest in electric actuator technology to fully automate the process of attaching to almost any hospital bed - **at the touch of a button!**

Operating the Gzelle Auto could not be easier! The Gzelle Auto drives easily under almost any hospital bed, and with the touch of a button, the hitch bar is raised until it automatically locates on the bed frame - and it's ready to drive off!

No more awkward hitch straps or noisy ratchets, the Gzelle Auto is whisper-quiet, simple, and very easy to operate. As it is a detachable unit, a single Gzelle Auto can serve a number of beds, making it a very cost-effective solution for patient transfer.

The unique design of the Gzelle Auto allows the bed to be turned in it's own length with minimal effort, while the controls are simple and easy-to-use. The new, full-action twist-grip throttle is simple and intuitive while the automatic braking and light, handle bar steering, allow finger-tip control by even the slightest operator.

The powerful, 24v heavy-duty drive mechanism will easily handle all standard hospital beds up to 350kg, while the Gzelle Auto HD will handle bariatric beds up to 750kg.
